_____
_____
_____
_____
_____
_____

Q.5 Read the passage carefully and answer the following questions.
Natural disasters are sudden events that cause great damage to life and property. Earthquakes, floods, cyclones, droughts, and volcanic eruptions are some common natural disasters. They occur due to changes in nature and cannot always be predicted.
Floods happen when rivers overflow because of heavy rainfall. Earthquakes shake the ground and damage buildings. Cyclones bring strong winds and heavy rain, especially in coastal areas. These disasters can destroy homes, crops, and roads, making life difficult for people.

Although we cannot stop natural disasters, we can reduce their effects by being prepared. Building strong houses, planting trees, and following safety rules can help save lives. Helping affected people and working together after a disaster is also very important.

Questions

A. Answer the following questions:
1. What are natural disasters?

_____

_____
